CLP Power Launches eMobility Network with Cross-Sector Partners to Promote Wider Use of Electric Commercial Vehicles

CLP Power Hong Kong Limited (CLP Power) and 14 businesses and organisations today (11 October) launched a cross-sector partnership called the eMobility Network to promote the wider use of electric commercial vehicles (ECVs) in Hong Kong. The network, which includes ECV manufacturers and operators, charging service providers, and a bank offering green finance services, will encourage technology exchange and accelerate the popularisation of ECVs in support of the Hong Kong SAR Government's target of achieving zero vehicular emissions and carbon neutrality by 2050.

Speaking at the launch ceremony, CLP Power Managing Director Mr Joseph Law said, "CLP Power will continue to draw on its expertise in energy and power supply to play a key role in the eMobility Network. CLP Power is committed to providing technical support for the development of ECVs and expanding and enhancing our power supply network to drive the transformation of green transport in Hong Kong in partnership with businesses from different sectors."

Environment and Ecology Bureau Deputy Secretary for Environment and Ecology (Environment) Mr Alan Lo, who officiated at the ceremony, said he was delighted with the network's collective effort to drive the transformation of green transport in Hong Kong. "Driven by various government policy measures, the percentage of electric private cars (PCs) among all newly registered PCs has soared in recent years, accounting for about 60% of newly registered PCs. To support the development of ECVs, the Government will implement policies aimed at promoting the expansion of quick charging network," he said. "The expertise of network members will contribute to further accelerating the electrification of the transportation in Hong Kong."

The eMobility Network will serve as a platform to promote knowledge exchange and cooperation between stakeholders in the electric vehicle (EV) ecosystem. Members of the network will help Hong Kong move towards a low-carbon future by engaging in collaborative efforts in four key areas: Power supply infrastructure and equipment, quick charging facilities, EV manufacturing and operation, and green finance.
